

Can script based languages, like DOORS® DXL, hack Natural Language Processing?

- Webinar rules:
 - The Webinar will start in few minutes
 - You'll be muted throughout the Webinar
 - There's a chat box for you to ask questions at any time during the webinar
 - Please address comments and questions to the user "The REUSE Company" and not to the presenter directly
 - If you have any technical issues please use this chat box, or mail us at:
support@reusecompany.com
 - The Webinar will be recorded. A link to the recording will be sent to you in few days time

WEBINARS 2018

**Can script based languages,
like DOORS® DXL, hack
Natural Language Processing?**

Monday, 23 April 2018

Presenters' profile

Dr. Simon Wright

Chief Systems Engineer

Simon Wright

simon.wright@reusecompany.com

- Description of the Reuse Company
- Background
- A Brief History of Requirements Quality
- The methods & functions needed to undertake:
 - textual analysis, and NLP syntax checking,
 - NLP for semantic checking, correctness, completeness and consistency
- Can script based languages hack NLP?
- Q&A

Brief description of The Reuse Company

**Trace + Retrieval + Quality
(Reuse)**

Aiming to **Improve Project performance**

By means of a: **Knowledge Centric Approach**

SQA -System Quality Analyzer
Global Quality Management

SIM –System Interoperability Manager

Tailorable Interoperability Platform

- R+ Manager

Managing requirements transformations

Managing models transformations

- T+ Manager

Managing traceability

- Reasoning Manager

Task based environment

**Systems
Knowledge
Repository
(SKR)**

**Systems
Knowledge Base
(SKB)**

**Systems

 - › NLP for semantic checking, correctness, completeness and consistency
- › Can script based languages hack NLP?
- › Q&A

- For 10 years I earned a living as a Rational® DOORS® consultant and DXL programmer, (and from time to time I still do!)
 - Trusted Borders – Metrics reporting
 - SAAB Avitronics, Sweden – SACREM
 - Russian Atomic Energy Authority, Moscow – TOI
 - Novo Nordisk, Denmark – Document/Module Templates
 - Syntell Stockholm – RQPlus contributor
 - Norewegian Army – DEx Manager
- DOORS is a mature tool for managing requirements – I have my own license, this year's Maintenance and Support cost me £1000 – I am committed to the tool but I will not be biased for or against DXL.

- › Q&A

- ▶ Tokenization – chopping a sentence into pieces. How to tokenize “can’t” or “L.E.D.”?
- ▶ Stemming - reducing words to their word stem, base or root form “cats” “catty” “catlike” all stem from CAT – what is the stem of “better”, (lemmatization).
- ▶ Part-of-speech tagging - determining the **parts** of speech for each word “Book a book from the book library”
- ▶ Disambiguation – from candidates term tags to only **one** term tag for each element

- ▶ Input: “The flight system shall have three engines”
- ▶ Output: list of simple terms with possible term tags
 - ▶ [The| DETERMINER],
 - ▶ [Flight| NOUN],
 - ▶ [System | NOUN, **PROPER NOUN**],
 - ▶ [Shall| VERB, **MODAL VERB**],
 - ▶ [Have| VERB],
 - ▶ [Three| NUMBER],
 - ▶ [Engine| NOUN]

- ▶ Phrase Identification
 - ▶ combining words into phrases
 - ▶ 'Flight System' is a single term
- ▶ Words to Numbers
 - ▶ three to 3
- ▶ Matching Process
 - ▶ list of terms grouped by recognized patterns
 - ▶ Subject
 - ▶ Verb / Verbal phrase
 - ▶ Object
 - ▶ Predicate

- ▶ Input:
 - ▶ [The| DETERMINER],
 - ▶ [Flight| NOUN],
 - ▶ [System | NOUN, PROPER NOUN],
 - ▶ [Shall| VERB, MODAL VERB],
 - ▶ [Have| VERB],
 - ▶ [Three| NUMBER],
 - ▶ [Engine| NOUN]
- ▶ Output:
 - ▶ [SUBJECT]
 - ▶ [The | DETERMINER]
 - ▶ [Flight System | PROPER NOUN]
 - [Flight| PROPER NOUN, NOUN],
 - [System| NOUN]
 - ▶ [VERB]
 - ▶ [Shall | VERB, MODAL VERB]
 - ▶ [Have | VERB]
 - ▶ [PREDICATE]
 - ▶ [3 | NUMBER]
 - ▶ [Engine | NOUN.

 - › NLP for semantic checking, correctness, completeness and consistency
- › Can script based languages hack NLP?
- › Q&A

- ▶ Tokenization – chopping a sentence into pieces.
- ▶ Matching Process – found against stored
- ▶ Problems
 - ▶ “cats” “catty” “catlike” all the same
 - ▶ Book a book from the book library
 - ▶ Flight System – one phrase
 - ▶ Forty three to 43
 - ▶ Match 1000 requirement words checked against 100 words = one hundred thousand compares!.

- ▶ Input:
“The flight system shall have three engines”
- ▶ Output:
 - ▶ {the, flight, system, shall, have, three, engines}

- › The Reuse Company

- › Q&A

String functions

- ▶ Declaration – a String is an array of Characters
- ▶ Tokenize
 - ▶ **Find** the position of a delimiter Char in a String – ‘space’, full stop, parenthesis
 - ▶ **Extract** a sequence of Chars from a string
 - ▶ **Regular expressions**
- ▶ Match
 - ▶ **Boolean Comparison / Contains**
 - ▶ **Regular expressions**

String Data Structure functions

- ▶ Declaration – an array of strings, linked lists, skip lists, buffer
- ▶ Tokenize
 - ▶ **Add** a string to array/list/buffer
 - ▶ **Remove** a string from array/list/buffer
 - ▶ **Searching** – avoid duplication
- ▶ Match
 - ▶ **Sorting** for searching
 - ▶ **Searching** – find a match

DXL provides all these functions – as well as many other languages.

Mitigation

- ▶ To avoid this issue use variable types, (Skip Lists, Array, Buffer), that have functions that explicitly de-allocate memory used by these variables
- ▶ But....

You can find an excellent dissertation on this by Mathias Mamsch in 2012 here:

<https://www.ibm.com/developerworks/community/forums/html/topic?id=77777777-0000-0000-0000-000014886977&ps=25>

String Memory Management

- ▶ Tony Goodman points out -
“Memory de-allocation is not automatic for the dynamic types Skip, Array, Buffer, DB, OleAutoArgs, IPC and Stat

Repeated use of these types can consume memory and reduce performance of DOORS

In some cases this can even lead to DOORS crashing”

Mitigation

- ▶ To avoid such memory leaks you must explicitly de-allocate memory used by these variables. This means that you should have a delete() or destroy() function call for every create() function call in your program
- ▶ Alternatively pass data by **reference** rather than by value ...

String Memory Management

Referencing is supported by DXL. It allows a convenient way of limiting data replication in passing data values between functions

With Referencing you can totally get rid of this memory leak. The accessed Buffer or Skip list, is truly handled as that same Buffer or Skip

Thus, the memory area will be emptied, when that Buffer or Skip is emptied or deleted

Mitigation

- ▶ Spend many hours and thousands of Euros/ Dollars/ Pounds/ SEKS/ NOKS etc and reprogram your DXL to use buffers and skip lists and pass by reference not value
- ▶ BUT! There is another problem.

Hidden formatting or different character set

- ▶ Below is a rich text string that contains the word “hello”
- ▶ `{\rtf1 \deff0{\fonttbl {\f1 Times New Roman;}}{\stylesheet {\s1 Normal;}}{\s1 hello\par}}`
- ▶ `String1 == String2` may result in False. Depending which character sets you are using, or rich text format, or embedded hidden rich text

Mitigation

- ▶ Convert the rich text to ASCII for proper comparison...
- ▶ BUT this will add to the “string table”!
- ▶ And the cycle starts again, memory is consumed, leaks occur.

- › The Reuse Company

- › Q&A

Language Functions

- ▶ String functions plus
- ▶ entity extraction, *
- ▶ sentiment analysis, *
- ▶ keyword extraction, *
- ▶ concept tagging, *
- ▶ relation extraction, *
- ▶ taxonomy classification, *
- ▶ language detection, *
- ▶ microformats parsing, *
- ▶ linked data support *

Language Data Structure Functions

- ▶ String data structure functions plus
- ▶ Relational Database Tables
- ▶ Index tables / Hash tables
- ▶ XML/XMI
- ▶ Meta data
- ▶ Serialisation.

* Offered by AlchemyAPI – an NLP API service

- › The Reuse Company

 - › textual analysis, and NLP syntax checking,
 - › **NLP for semantic checking, correctness, completeness and consistency**
- › Can script based languages hack NLP?
- › Q&A

Natural Language Processing: Correctness and Consistency

- › The three words 'book', 'library' and 'a' can be ordered in six ways
- › Only three are **syntactically** correct

- › "A library **book**"
- › "A **book** library"
- › "**Book** a library"

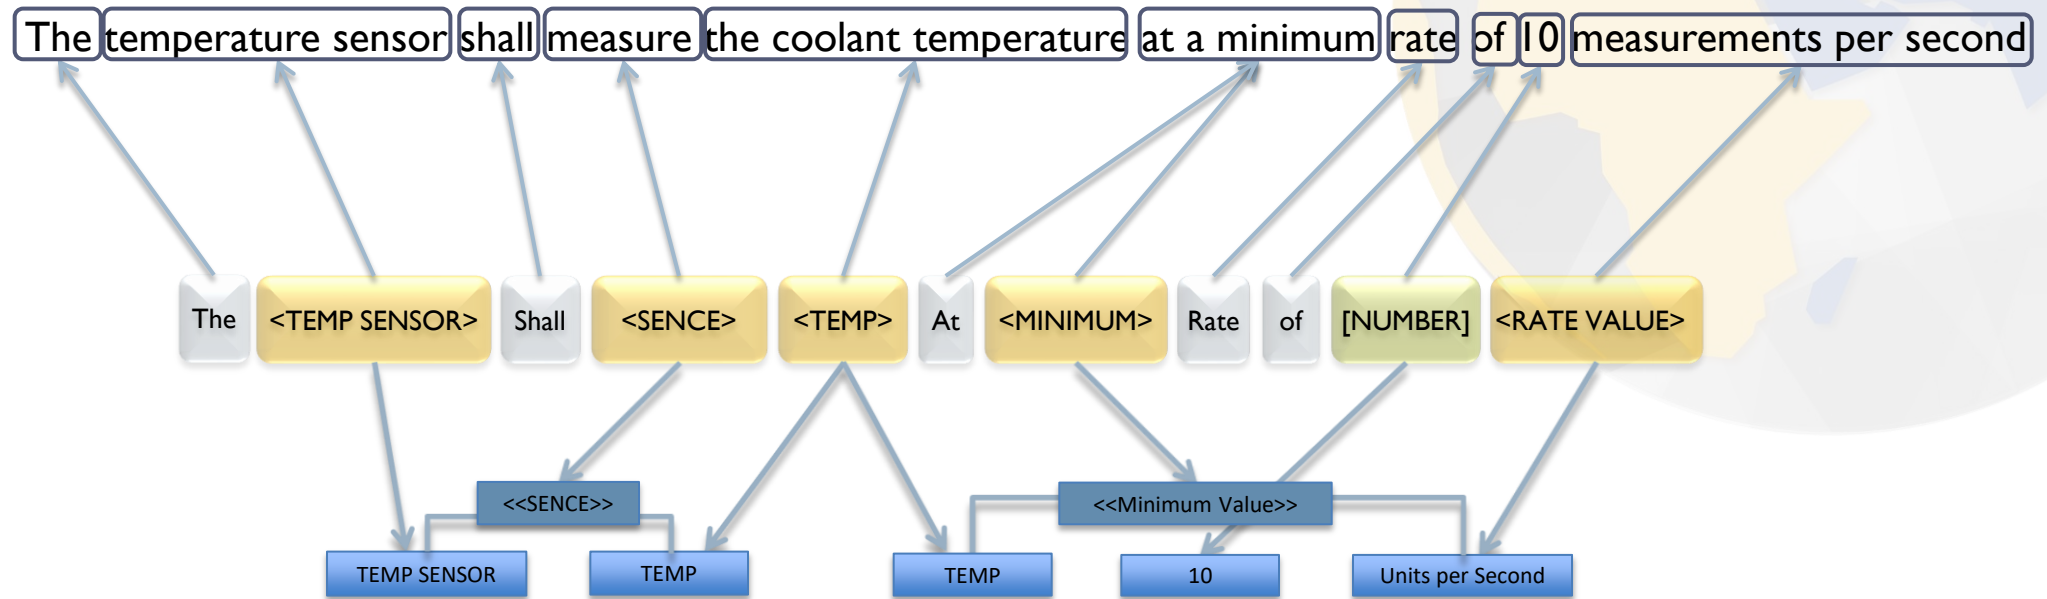

An object

A descriptor

An action.

Book the book from the book library

Phrase	Correct	Consistent	Total
“A library book”	0	0	0
“A book library”	0	1	1
“Book a library”	0	1	1
“Library a book”	1	0	1
“Library book a”	1	0	1
“book Library a”	1	1	2
Book the book from the book library	0	2	2
Reserve the book from the publications library.	0	0	0

Classified TERMS allow meaning, (semantic), to be checked.

The relationships between the terms are best handled by using a **Relational Database**.

William M. Wilson – “Writing Effective Natural Language Requirements Specifications” The Journal of Defense Software Engineering February 1999

Each specification statement consists of four basic structural elements—entities, actions, events, and conditions.

These elements can be used or modified by various cases such as the following:

- Owner.
- Actor.
- Target.
- Constraint.
- Owned.
- Action.
- Object.
- Localization.

The recommended model for a specification statement's structure is as follows:

- Localization.
- Actor/Owner.
- Action.
- Target/Owner.
- Constraint.

For example, “When three or more star trackers lose reference stars, the spacecraft shall immediately align its main axis on the earth-sun line unless the optical instrument's cover is not closed.”

Boilerplates and EARS

EARS (Easy Approach to Requirements Syntax) - RE09, IEEE, August 2009, Alistair Mavin et al Rolls-Royce PLC

4.1 Generic requirements syntax

<optional preconditions> <optional trigger> the <system name> shall <system response>

4.2 Ubiquitous requirements

The <system name> shall <system response>

4.3 Event-driven requirements

WHEN <optional preconditions> <trigger> the <system name> shall <system response>

4.4 Unwanted behaviours

IF <optional preconditions> <trigger>, THEN the <system name> shall <system response>

4.5 State-driven requirements

WHILE <in a specific state> the <system name> shall <system response>

4.6 Optional features

WHERE <feature is included> the <system name> shall <system response>

4.7 Complex requirement syntax

For requirements with complex conditional clauses, combinations of the keywords When, While and Where may be required.

INTERNATIONAL
STANDARD

**ISO/IEC/
IEEE
29148**

First edition
2011-12-01

Systems and software engineering
Life cycle processes
Requirements engineering

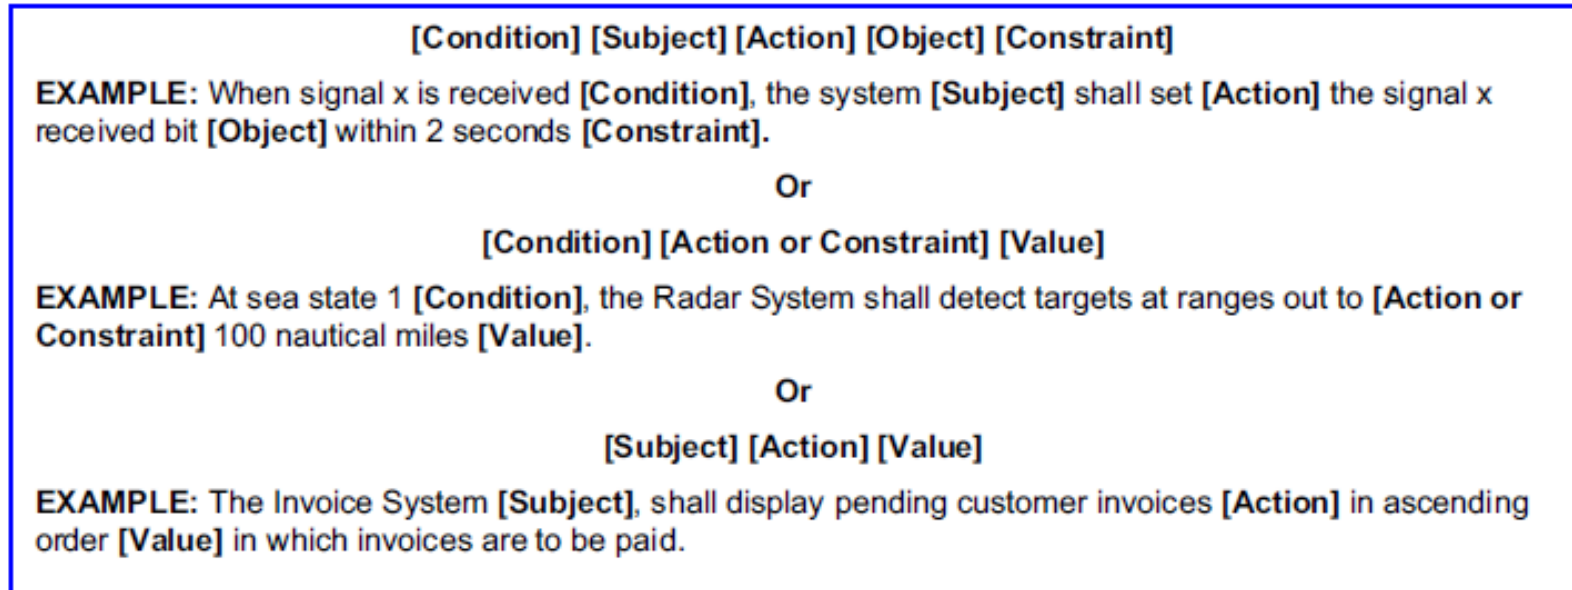

Figure 1 — Examples of Requirement Syntax

- Mining – analysing older specifications for (compound) nouns and verbs (phrases)
- To build a domain specific relational database – or Knowledge Base, as a capital asset of intellectual property giving a competitive advantage for the future, which contains
 - Domain specific Terms
 - Agreed linguistic patterns
- Terms plus patterns = Rules

- R1 – Use definite article “the” rather than the indefinite article “a.”
- R2 – Use the active voice with the actor clearly identified.
- R3 – Make the subject of the requirement appropriate to the layer in which the requirement exists.
- R4 – Only use terms defined in the glossary.
- R5 – Quantify requirements precisely – Avoid imprecise quantifiers that provide vague quantification, such as “some,” “any,” “several,” “many,” “a lot of,” “a few,” “approximately,” “almost always,” “nearly,” “about,” “close to,” “almost,” “approximate.”
- R6 – Use appropriate units, with tolerances or limits, when stating quantities – Explicitly state units for all numbers.
- R7 – Avoid the use of adverbs – words that end in -ly” .

The universal guide to writing requirements

Avoid the bad and Enforce the good

But exactly what is “bad” and what is “good”?

Here are some examples

Rule 01 Precision - Indefinite articles

Avoid

- ▶ a
- ▶ an

▶ The <system> shall provide **a** time display

Enforce

- ▶ The definite article

▶ The <system> shall display **the** Current_Time.

R05 Precision - Imprecise quantifiers

Avoid

► 'some', 'any', 'several', 'many', 'a lot of', 'a few', 'approximately', 'almost always', 'very nearly', 'nearly', 'about', 'close to', 'almost', 'approximate', 'significant', 'flexible', 'expandable', 'typical', 'sufficient', 'adequate', 'appropriate', 'efficient', 'effective', 'proficient', 'reasonable'.

► The Flight_Information_System shall display the current altitude to **approximately** 1 meter resolution

Enforce

► Quantification of performance criteria

► The Flight_Information_System shall display Current_Altitude **plus or minus 1 meter**.

R26 Consistency - Pronouns

Avoid

▶ 'it', 'this', 'that', 'he', 'she', 'they' and 'them'

▶ The controller shall send the driver **his** itinerary for the day. **It** shall be delivered at least 8 hours prior to **his** Shift

Enforce

▶ The name of the role of a Stakeholder e.g. The operator of the system , the maintainer of the system

▶ The Controller shall send the Driver_Itinerary for the day to the Driver at least 8 hours prior to the Driver Shift.

DOORS Engineer Contractor Daily Rate Trend

This chart provides the 3-month moving average for daily rates quoted in contract jobs citing DOORS Engineer.

- For about €3995 you can get software to do comprehensive* quality analysis (yes, the Reuse suite)
- For €3995 @ €450 a day you can get maybe nine days of DXL development effort which will only give you
 - some textual analysis and
 - an ongoing maintenance burden

<https://www.itjobswatch.co.uk/contracts/uk/doors%20engineer.do>

*Text analysis, syntax analysis, semantic analysis, applying correctness, completeness and consistency rules

- › The methods & functions needed to undertake:
 - › textual analysis, and NLP syntax checking,
 - › NLP for semantic checking, correctness, completeness and consistency
- › **Can script based languages hack NLP?**
- › Q&A

Can script based languages cope with Requirements Quality Analysis?

textual Analysis

- ▶ Yes, **BUT** ...
- ▶ the DXL data structures are severely challenged and memory leaks and performance will be issues

Natural Language Processing

- ▶ NO!
- ▶ NLP extracts meaning, meaning is about relationships and so a relational database or equivalent is required

Do not use a hammer on a screw –
it is not the tool for the job!

A word cloud featuring the phrase "Thank You" in numerous languages. The words are arranged in a circular pattern, with the largest words being "THANK" and "YOU". Other visible words include "GRACIAS", "ARIGATO", "SHUKURIA", "GOZAIMASHITA", "EFCHARISTO", "KOMAPSUMNIDA", "MAAKE", "GRAZIE", "MEHRBANI", "PALDIES", "BOLZIN", "MERCİ", "BİYAN", "SHUKRIA", "TINGKI", "YAQHANYELAY", "TASHAKKUR ATU", "SUKSAMA", "EKHMET", "DANKSCHEEN", "JUSPAXAR", "MERASTAWHY", "GAEJTHO", "FAKAAUE", "CHALTU", "NUHUN", "SNACHALHUYA", "WADEEJA", "MAITEKA", "HUI", "YUSPAGARATAM", "DANYABAD", "ANHA", "ATTO", "MIRSI", "SPASIBO", "DENKAUJA", "NEHACHALIYA", "UNALCHEESH", "HATUB", "SUI", "EFOJU", "SIKOMO", "MAKETAI", "MIHMONCHAR", "BAIKA", "TAVTAPUCH", "MEDAWAGSE", "SANCO", "MERASTAWHY", "GAEJTHO", "FAKAAUE", "CHALTU", "NUHUN", "SNACHALHUYA", "WADEEJA", "MAITEKA", "HUI", "YUSPAGARATAM", "DANYABAD", "ANHA", "ATTO", "MIRSI", "SPASIBO", "DENKAUJA", "NEHACHALIYA", "UNALCHEESH", "HATUB", "SUI", "EFOJU", "SIKOMO", "MAKETAI", "MIHMONCHAR", "BAIKA", "TAVTAPUCH", "MEDAWAGSE", "SANCO", "MERASTAWHY", "GAEJTHO", "FAKAAUE".

Next webinar

- **Topic:** Procuring systems: PQS for SMARTer acquisition?
- **Content:**
Competition in a fair and transparent manner is the heart of procurement, that is why you probably already have a process in place to ensure the legal aspects of Fairness, Integrity and Transparency throughout the competition.
- But what about the two other corner stones and key guiding principles of Economy and Effectiveness, and not least the principle of Best value for money?
- This suite guarantees that the purchasing body is conducting the procurement process with maximum effectiveness in relation to the overall budget, and that the principle of Best value for money is indisputable and crystal clear from the initiation of the procurement project, through requirements definition, strategy selection and finally, bid evaluation and selection.
- **Dates:**
 - Tuesday 8th May 2018 at 5.00 pm CET
 - Wednesday 9th May 2018 at 9.00 am CET
